

The World's Most Dedicated Never Give Up

Think of what you could achieve if the best possible care was all that mattered. If you had the encouragement and opportunity to truly bond with the patients in your care. And if you could collaborate with the world's brightest scientists, in a bench-to-bedside environment that put you on the leading edge of clinical breakthroughs for children with cancer, sickle cell, and other life-threatening diseases. It's possible at St. Jude Children's Research Hospital. As a clinical professional with us, you'll be part of a team that stops at nothing to make a difference in the lives of patients with the rarest of conditions. All while receiving the resources and support you need to advance your career.

Clinical Research Scientist Memphis, TN

Job Description:

With the opening of the St. Jude Red Frog Proton Therapy Center, the Department of Radiation Oncology is seeking an expert in high-throughput automated imaging analysis. The ideal candidate will have experience with imaging pipeline development, neuro-imaging protocols, diffusion imaging, PET analysis, perfusion and anatomic sequences. Relevant software used includes Matlab, FreeSurfer, SPL and MIM. Join our team which has access to world-class resources while you help us build out efficiencies in our imaging pipeline.

Apply now if you are passionate about making a difference on a team that never quits!

Job Qualifications:

MD or a PhD in an appropriate scientific field is required.

Three (3) years of relevant and productive research experience in clinical/population-based outcomes and health behavior research required.

Experience must include study design methodology, protocol development, study conduct and analysis.

Ready to join a team dedicated to being our best, because we believe anything is possible?
