

ASN 44TH ANNUAL MEETING

VIRTUAL

JANUARY 25-31, 2021 • VIRTUAL

ASN 2021 VIRTUAL MEETING

PROGRAM AT-A-GLANCE • JANUARY 25-31, 2021

	Monday, January 25		Tuesday, January 26		Wednesday, January 27	
11:00 - 12:30 ET 10:00 - 11:30 CT 9:00 - 10:30 MT 8:00 - 9:30 PT	Basic neurosonology - Mark Rubin	Neuroimaging and thiamine deficiency - Jerome Graber	Basic neurosonology - Mark Rubin	Neuroimaging of MS and MS Mimics - Konstantin Balashov	Advanced neurosonology - Mark Rubin	Patient Satisfaction and Value Creation for Neuroimagers - Peter Kalina
	30-Minute Break		30-Minute Break		30-Minute Break	
1:00 - 2:30 ET 12:00 - 1:30 CT 11:00 - 12:30 MT 10:00 - 11:30 PT	Basic neurosonology - Mark Rubin	Clinical Nuclear Neurology of dementia, parkinsonism, epilepsy, and traumatic brain injury - Robert Miletich	Advanced neurosonology - Mark Rubin	Neuroimaging of Headache - Jennifer McVige	Advanced neurosonology - Mark Rubin	Neuroimaging in distinctive stroke syndromes: a case-based approach - Oana Dumitrascu
					30-Minute Break	
2:00 - 4:30 ET 2:00 - 3:30 CT 1:00 - 2:30 MT 12:00 - 1:30 PT					Advanced Neurosonology: Diagnostic & Therapeutic TCD in Acute Stroke - Andrei Alexandrov	

	Thursday, Jan. 28	Friday, January 29	Saturday, January 30	
11:00 - 12:30 ET 10:00 - 11:30 CT 9:00 - 10:30 MT 8:00 - 9:30 PT	Covid imaging - Andrei Alexandrov	Emerging Clinical Application for Transcranial Doppler Ultrasound in Pediatric Critical Care: A Case-Based Discussion - Brian Appavu	Neuroimaging fundamentals a case study approach - Ryan Hakimi and Emma Fields	Transcranial Doppler Interpretation Skills - Adult and Pediatric (LIVE) - Colleen Douville and Brenda Rinsky
	30-Minute Break	30-Minute Break	30-Minute Break	
1:00 - 2:30 ET 12:00 - 1:30 CT 11:00 - 12:30 MT 10:00 - 11:30 PT	Business meeting/awards - Staff and Leadership	Implementation of Neuroimaging in Pediatric Arterial Ischemic Stroke Management - Brian Appavu	Neuroimaging fundamentals: a case study approach - Ryan Hakimi and Emma Fields	Transcranial Doppler Interpretation Skills - Adult and Pediatric (LIVE) - Colleen Douville and Brenda Rinsky
	30-Minute Break	30-Minute Break	30-Minute Break	
3:00 - 4:30 ET 2:00 - 3:30 CT 1:00 - 2:30 MT 12:00 - 1:30 PT	Virtual Poster Session	Advanced neurosonology - Mark Rubin	Pediatric Imaging - Jennifer McVige	Neuroimaging fundamentals: a case study approach - Ryan Hakimi and Emma Fields
				Transcranial Doppler Interpretation Skills - Adult and Pediatric (LIVE) - Colleen Douville and Brenda Rinsky

	Sunday, January 31		Monday, February 1
11:00 - 12:30 ET 10:00 - 11:30 CT 9:00 - 10:30 MT 8:00 - 9:30 PT	Practice updates - Neurosonology - Jongyeol Kim	Practice updates - MRI - Director TBD	Neurosonology and Neurovascular Specialist Exam
	30-Minute Break		
1:00 - 2:30 ET 12:00 - 1:30 CT 11:00 - 12:30 MT 10:00 - 11:30 PT	Practice updates - Neurosonology - Jongyeol Kim	Practice updates - MR/CT - Director TBD	

ASN 2021 ANNUAL MEETING PROGRAM

ALL TIMES MOUNTAIN STANDARD TIME

Monday, January 25

Basic Neurosonology: Ultrasound Physics, Instrumentation and Examination Technique

Course Director: Mark Rubin

9:00 am - 12:30 pm

Course Description/Abstract: This course will cover the basics of the physics of ultrasound, how those principles are applied to neurological ultrasound, as well as demonstrate the instrumentation and examination technique for three common neurosonology applications: carotid duplex, transcranial duplex, and transcranial Doppler.

Course Schedule:

9:00 - 9:45 am	Ultrasound Physics - Mark N Rubin, MD
9:45 - 10:30 am	Applied Ultrasound Physics - Andrei V Alexandrov, MD
10:30 - 11:00 am	Break
11:00 - 11:30 am	Carotid Duplex Ultrasonography: Instrumentation and Technique - John Bennett, PhD, RVT, NVS
11:30 am - 12:00 pm	Transcranial Duplex Ultrasonography: Instrumentation and Technique - Colleen Douville, RVT, NVS
12:00 - 12:30 pm	Transcranial Doppler Ultrasonography: Instrumentation and Technique - Brenda Rinsky, RVT, NVS

Course Objectives:

1. To review basic ultrasound physics.
2. To apply the fundamentals of ultrasound physics to neurosonology.
3. To review instrumentation and examination technique of carotid duplex, transcranial duplex and transcranial Doppler.

Modalities: Ultrasound: Carotid Duplex, Transcranial Duplex, Transcranial Doppler

Neuroimaging & Thiamine Deficiency

Course Director: Jerome Graber

9:00 - 10:30 am

Course Description/Abstract: Neurologic thiamine deficiency (Wernicke's) remains underrecognized and is a treatable cause or cofactor in neurologic illness. While traditionally associated with alcohol use, several other clinical risk factors have been described associated with neurologic thiamine deficiency, and clinical criteria have been studied to diagnosed thiamine deficiency. Classic and atypical neuroimaging features can help to recognize neurologic thiamine deficiency and improve diagnosis and adequate treatment, especially in at-risk populations.

Course Schedule:

9:00 - 9:20 am	Jerome Graber: case presentation
9:20 - 9:40 am	Jerome Graber: case presentation
9:40 - 10:00 am	Elie Isenberg-Grzeda: review on risk factors for thiamine deficiency and underlying pathophysiology and treatment
10:00 - 10:15 am	Elie Isenberg-Grzeda: review on risk factors for thiamine deficiency and underlying pathophysiology and treatment
10:15 - 10:30 am	Jerome Graber: review of neuroimaging features of thiamine deficiency

Course Objectives:

1. Improved knowledge of clinical risk factors for neurologic thiamine deficiency
2. Improved recognition of neuroimaging clues to thiamine deficiency
3. Better understanding of the physiology of neurologic thiamine deficiency and supplementation

Modalities: MR

Clinical Nuclear Neurology of Dementia, Parkinsonism, Epilepsy, & Traumatic Brain Injury

Course Director: Robert Miletich

11:00 am - 12:30pm

Course Description/Abstract: Although most in the neurology and clinical neuroscience communities have some familiarity with positron emission tomography (PET) and single photon emission computed tomography (SPECT), knowledge of the practical utilization of these modalities for clinical patients is not as prevalent. This lack of knowledge of applied Nuclear Neurology extends to what clinical questions can be addressed by PET and SPECT, what radiopharmaceuticals are clinically available (ie. Approved by FDA) and what types of studies can be performed. This course focuses on practical, present day, clinical application of Nuclear Neurology, presenting some basic science, but illustrating concepts and applications through clinical material. The capacity of Nuclear Neurology to address management questions which arise in multiple disease states will be discussed. Radiopharmaceuticals available clinically will be presented. Imaging indications in the disease states of dementia, neurodegenerative disease, parkinsonism, epilepsy, and traumatic brain injury will be reviewed. Standard and newly developed imaging techniques will be discussed. Finally, government-mandated training requirements for Nuclear Neurology will be presented.

Course Schedule:

11:00 - 11:20 am	Dementia - Robert Miletich
11:20 - 11:40 am	Parkinsonism - Robert Miletich
11:40 -12:00 pm	Epilepsy - Robert Miletich
12:00 -12:15 pm	Traumatic Brain Injury - Robert Miletich
12:15 -12:30 pm	Regulatory Requirements to Practice Nuclear Neurology - Robert Miletich

Course Objectives:

1. Know what kind of Nuclear Neurology studies are currently available to help manage patients, including which radiopharmaceuticals are FDA-approved.
2. Understand what clinical questions can be addressed in different neurologic disease states by clinically available PET and SPECT.
3. Decide how best to incorporate Nuclear Neurology into clinical practice, either through collaboration with other physician groups or pursuing government-mandated nuclear training.

Modalities: PET, SPECT, Nuclear Scintigraphy

Tuesday, January 26

Basic Neurosonology: TCD and CUS

Course Director: Mark Rubin

9:00 am – 12:30pm

Course Description/Abstract: This course will build on the basics of ultrasound physics, instrumentation and examination technique learned in the previous course to introduce the application of these principles for transcranial Doppler (TCD) and carotid duplex ultrasound (CUS). These in-depth reviews will cover critical principles for understanding performance and interpretation as well as an overview of clinical indications for each modality.

Course Schedule:

9:00 - 10:30 am	Basic Neurosonology: TCD – Alexander Razumovsky, PhD, FAHA, NVS
10:30 - 11:00 am	Break
11:00 am - 12:30 pm	Basic Neurosonology: CUS – Charles H. Tegeler IV, MD

Course Objectives:

1. To describe the key principles of TCD performance and interpretation
2. To describe the key principles of CUS performance and interpretation

Modalities: Ultrasound: Carotid Duplex, Transcranial Duplex, Transcranial Doppler

Neuroimaging of MS & MS Mimics

Course Director: Konstantin Balashov

9:00 - 10:30 am

Course Description/Abstract: This course is designated for neurologists and other physicians interested to improve their knowledge and skills in neuroimaging of patients with MS and major MS mimics. In the first part of this course, we are going to review the role of MRI in disease diagnosis and monitoring disease activity. In the second part, we will discuss neuroimaging of common demyelinating disorders of the CNS other than MS. The list of common MS mimics includes but is not limited to NMOSD, ADEM, Neurosarcoidosis, and Neuroborreliosis.

Course Schedule:

9:00 - 9:40 am	Neuroimaging in MS - Konstantin Balashov, MD, PhD
9:40 - 9:50 am	Break
9:50 - 10:30 am	Neuroimaging in NMOSD and other MS mimics - Konstantin Balashov, MD, PhD

Course Objectives:

1. To evaluate key neuroimaging features of MS
2. To review the role of conventional MRI in MS diagnosis

- To discuss neuroimaging of NMOSD, ADEM and other common MS mimics.

Modalities: MRI

Headache

Course Director: Jennifer McVige
11:00 – 12:30 pm

Course Description/Abstract: The Neuroimaging of Headache course was designed to aid in diagnosis and treatment through the use of neuroimaging in a patient presenting with headaches. The course will review the imaging characteristics and how the findings relate to the pathology.

Course Schedule:

11:00 - 11:30 am	Neuroimaging of Secondary Headache Disorders - Laszlo Mechtler MD
11:30 - 12:00 am	Neuroimaging of Headache in Pregnancy- Dara Jameison MD
12:00 -12:20 pm	Low and High Pressure Headaches - Jennifer McVige MD
12:20 pm -12:30 pm	Questions

Course Objectives:

- Identify the causes of secondary headache disorders and discuss how the findings on MRI and CT imaging may clarify diagnosis and treatments.
- Review the safety of imaging in pregnancy and causes of headaches during pregnancy as identified on neuroimaging.
- Discuss neuroimaging findings of headaches caused by variations in CSF pressure.

Modalities: MRI, MRA, CT, CTA

Wednesday, January 27

Pediatric and Advanced Neurosonology

Course Director: Mark Rubin
9:00 am – 12:30 pm

Course Description/Abstract: These courses will cover the breadth of neurosonology in the pediatric population as well as the first course in advanced neurosonology discussing the rationale, technique and evidence for TCD monitoring.

Course Schedule:

9:00 - 10:30 am	Pediatric Neurosonology - Kerri LaRovere, MD & Nicole O'Brien, MD
10:30 - 11:00 am	Break
11:00 am - 12:30 pm	Advanced Neurosonology: TCD Monitoring - Mark N Rubin, MD, RPVI, NVS

Course Objectives:

- To define and discuss neurosonology applications in pediatric populations
- To define and discuss TCD monitoring rationale, technique and clinical evidence

Modalities: Ultrasound, Carotid Duplex, Transcranial Duplex, Transcranial Doppler

Patient Satisfaction and Value Creation

Course Director: Peter Kalina
9:00 – 10:30 am

Course Description/Abstract: Creating value, optimizing customer service and maintaining patient satisfaction are the goals of any health care provider. While these concepts have many unifying themes, they are also open to a degree of variability and interpretation. We will address these from two potentially unique perspectives. We hope and anticipate that the subjective nature of these principles will stimulate a great deal of discussion.

Course Schedule:

9:00 – 9:45 pm	Patient Satisfaction and Value Creation – Radiologist's Perspective - Peter Kalina
9:45 – 10:30 pm	Patient Satisfaction and Value Creation – Neurologist's Perspective - Laszlo Mechtler

Course Objectives:

- Develop an understanding of what drives value in health care
- Become familiar with patient satisfaction surveys

Desirable Physician Attributes:

- Understand that there are a multitude of factors that contribute to optimal patient outcomes
- Our definition of value, satisfaction, and service may have similarities but may also vary with our perspective

Neuroimaging in Distinctive Stroke Syndromes: A Case-Based Approach

Course Director: Oana Dumitrascu

11:00 – 12:30 pm

Course Description/Abstract: This course is designed to provide an update on various neuroimaging modalities and their applications in distinctive neurovascular syndromes. Following a case-based approach, we will review ocular, orbital and spinal cord vascular syndromes. We will discuss various cerebral vasculopathies and the value of neuroimaging in establishing the positive diagnosis. Imaging modalities to evaluate the extracranial large vessel vasculitis will be appraised. More specifically, the course will review current advances and limitations of MRI, CT, high-resolution vessel wall imaging and temporal artery ultrasound in specific syndromes.

Course Schedule:

11:00 - 11:20 am	Zhaoyang Fan PhD.: High-resolution vessel wall imaging in intracranial vasculopathies
11:20 - 11:40 am	Nickolas Zalewski MD: Neuroimaging in vascular spinal cord syndromes
11:40 - 11:00 am	Oana Dumitrascu MD: Neuroimaging in vascular eye disorders
12:00 - 12:15 pm	Gyanendra Kumar: Temporal artery ultrasound and its applications in giant cell arteritis
12:15 - 12:30 pm	Reza Bavarsad Shahripour MD: Neuroimaging in CNS vasculitis

Course Objectives:

1. To recognize specific neuroimaging features in vascular ocular, orbital and spinal cord disorders
2. To provide an update on the high-resolution vessel wall imaging techniques, and their applications in intracranial vasculopathies, such as reversible cerebral vasoconstriction syndrome, intracranial atherosclerotic disease, cerebral vasculitis
3. To review the application of temporal artery ultrasound in large vessel vasculitis

Modalities: MRI, CT, MR/CT angiogram, ultrasound, high-resolution vessel wall imaging

Thursday, January 28

Pending info...

Friday, January 29

Emerging Clinical Application for Transcranial Doppler Ultrasound in Pediatric Critical Care: A Case-Based Discussion

Course Director: Brian Appavu, MD

9:00 – 10:30 am

Course Description / Abstract: Transcranial Doppler (TCD) ultrasonography is a non-invasive, bedside monitor that allows for real-time measurements of cerebral blood flow, and is gaining popularity in the pediatric neurocritical care population. In this session, we will review existing literature describing the usage of transcranial Doppler ultrasound in pediatric neurocritical care, and consensus recommendations regarding its usage. Then, the speakers will engage in a lively case-based discussion of how they would use transcranial-Doppler ultrasound as a tool in critical care management, and how they would address controversial findings. Cases discussed will include patients with traumatic brain injury, cerebral vasospasms, cardiac arrest, and those undergoing extracorporeal membrane oxygenation. Each case will include time for initial case presentation, speaker-based discussion on how data can be used, case progression and audience question and answer.

Course Schedule:

1. Introduction – Brian Appavu, 5 minutes
2. Emerging literature on Transcranial Doppler Ultrasound in Pediatric Critical Care – Kerri LaRovere, 10 minutes
3. Transcranial Doppler Ultrasound in TBI Management (15 minutes)
 - Case presentation, Karin Reuter-Rice
 - Group discussion: Brian Appavu, Kerri LaRovere, Marlina Lovett, Karen Lidsky, Darryl Miles
 - Q & A
4. Transcranial Doppler Ultrasound in Cerebral Vasospasm Management (15 minutes)
 - Case presentation, Marlina Lovett
 - Group Discussion: Brian Appavu, Kerri LaRovere, Darryl Miles, Karen Lidsky, Karin Reuter-Rice
 - Q & A
5. Transcranial Doppler Ultrasound in Cardiac Arrest (15 minutes)
 - Case Presentation: Darryl Miles
 - Group discussion: Brian Appavu, Kerri LaRovere, Marlina Lovett, Karen Lidsky, Karin Reuter-Rice
 - Q & A
6. Transcranial Doppler Ultrasound in Extracorporeal Membrane Oxygenation (15 minutes)
 - Case Presentation: Karen Lidsky
 - Group discussion: Brian Appavu, Kerri LaRovere, Marlina Lovett, Darryl Miles, Karin Reuter-Rice
 - Q & A

Course Objectives:

1. Review current practices of utilizing transcranial Doppler ultrasound in pediatric neurocritical care.
2. Discuss how transcranial Doppler ultrasound can be applied

- in a variety states of children with critical illness.
3. Discuss controversies in management when applying transcranial Doppler ultrasound to guide clinical management in critically ill children.

Modalities: Transcranial Doppler Ultrasound

Implementation of Neuroimaging in Pediatric Arterial Ischemic Stroke Management

Course Director: Brian Appavu, MD

11:00 am – 12:30 pm

Course Description / Abstract: High-level evidence-based guidelines for the diagnosis and management of adult arterial ischemic stroke and certification of stroke centers that follow these guidelines has led to standardization of adult stroke management. In contrast, childhood arterial ischemic stroke carries less evidence-based guidelines, making diagnostic and management strategies more challenging. In this session, we will discuss the role of neuroimaging in pediatric stroke management. We will discuss existing evidence for perfusion imaging and the role of mechanical thrombectomy after pediatric arterial ischemic stroke. We will discuss how transcranial Doppler ultrasound may be used in clinical decision support of children at risk of stroke. We will discuss imaging modalities implemented in the diagnosis of Bow Hunter Syndrome, a unique cause of pediatric posterior fossa strokes. We will also describe how to employ effective neuroimaging protocols in the development of an institutional pediatric acute stroke response protocol. The session will end with time allotted for questions and answers with the audience.

Course Schedule

1. Introduction: Brian Appavu (5 minutes)
2. Perfusion Imaging and the Role of Mechanical Thrombectomy in Pediatric Arterial Ischemic Stroke – Sarah Lee, Stanford University (18 minutes)
3. Use of Transcranial Doppler Ultrasound in Children at Risk of Pediatric Stroke – Kerri LaRovere, Boston Children's Hospital (18 minutes)
4. Diagnosis and Management of Bow Hunter Syndrome: A Unique Cause of Pediatric Stroke – Todd Abruzzo MD, Phoenix Children's Hospital (18 minutes)
5. Developing a Pediatric Acute Stroke Response Protocol – Dana Harrar, Children's National Medical Center (18 minutes)
6. Question and Answers: (13 minutes)

Course Objectives

1. Review applicability perfusion-weighted imaging and ultrasound in pediatric stroke management
2. Discuss usage of various neuroimaging modalities in the diagnosis of unusual pediatric stroke conditions
3. Discuss strategies of implementing neuroimaging protocols as part of a clinical pathway for pediatric acute stroke management

Desired Physician Attributes

1. Patient Care

2. Medical Knowledge
3. Practice-based learning and improvement

Modalities Addressed Within This Session

1. CT and MR Perfusion weighted imaging
2. Digital Subtraction Cerebral Angiography
3. Transcranial Doppler Ultrasound
4. CT imaging, including angiography
5. MR imaging, including angiography

Advanced Neurosonology: Critical Care and Emerging Applications in Neurosonology

Course Director: Mark Rubin

1:00pm – 2:30pm

Course Description/Abstract: This course will cover neurosonology applications in the intensive care unit, including the role of neurosonology in multimodal monitoring, as well as emerging applications of neurological ultrasound.

Course Schedule:

1:00 - 1:45 pm	Advanced Neurosonology: Critical Care Neurosonology - Ryan Hakimi, DO, RPVI, NVS
1:45 - 2:30 pm	Advanced Neurosonology: Emerging Applications of Neurological Ultrasound - Aarti Sarwal, MD

Course Objectives:

1. To define and discuss neurosonology applications in the intensive care unit setting
2. To define and discuss emerging clinical applications of neurological ultrasound

Modalities: Ultrasound, Carotid Duplex, Transcranial Duplex, Transcranial Doppler

Pediatric Imaging

Course Director: Jennifer McVige

1:30 pm – 3:00 pm

Course Description/Abstract: The Pediatric Neuroimaging course was designed to highlight diseases in pediatric neurology where neuroimaging can aid in diagnosis and treatment. The course will review the imaging characteristics and how the findings relate to the pathology.

Course Schedule:

1:30 - 2:10 pm	Pediatric Head and Neck - Peter Kalina, MD, MBA
2:10 -2:50 pm	The Neuroimaging of Infections in Pediatric Patients with a focus on Covid - Jennifer McVige, MD, MA
2:50 -3:00 pm	Questions

Course Objectives:

1. Identify the anatomy in the head and neck of pediatric

- patients on MRI and CT imaging.
- Review common infections in pediatric patients as visualized on neuroimaging of the head on CT and MRI.
 - Discuss new research findings on neuroimaging in Covid patients.

Modalities: MRI, MRA, CT, CTA

Saturday, January 30

Transcranial Doppler Interpretation Skills – Adult (live)

Course Director: Colleen Douville BA, RVT, CPMM, NVS & Brenda Rinsky RDMS, RVT, NVS

8:45 am – 2:15 pm

Course Description/Abstract: This one day intensive course is designed to provide an overview of the use of Transcranial Doppler (TCD) in patients with multiple forms of cerebrovascular disease and specifically on how to interpret TCD exam findings. It is intended for those engaged in performing and/or interpreting TCD studies in a variety of specialized clinical settings.

The course is designed to be interactive with ample opportunity to practice interpretation skills in real-time. Physician faculty with expertise in transcranial Doppler will present an overview of each clinical topic and representative case studies. Expert neurovascular sonographers and physician faculty will then work in breakout sessions with participants to interpret case studies. Materials will be provided in advance with detailed diagnostic criteria for each topic.

Course Schedule:

08:45 - 09:00 am	Welcome - Instructions - Brenda Rinsky RDMS, RVT, NVS & Colleen Douville BA, RVT, CPMM, NVS
09:00 - 09:45 am	Principles of Waveform Interpretation - John Bennett PhD
09:45 - 10:15 am	Intracranial Stenosis/Thrombosis and Microemboli - Aaron Stayman MD
10:15 - 10:30 am	Breakout
10:30 - 10:45 am	Break
10:45 - 11:15 am	Collateral Flow - Emily Ho MD, PhD
11:15-11:30 am	Breakout
11:30-12:00 am	Patent Foramen Ovale Grading - Mark Rubin MD
12:00 pm - 12:15 pm	Breakout
12:15 - 12:30 pm	Break
12:45 - 1:15 pm	Vasospasm Aarti Sarwal MD
1:15 - 1:30 pm	Breakout
1:30 - 2:00 pm	Intracranial Pressure and Cerebral Circulatory Arrest - Konrad Schlick MD
2:00 - 2:15 pm	Breakout

2:15 pm	Closing Remarks
---------	-----------------

Course Objectives:

- Describe accepted applications of transcranial Doppler ultrasound for cerebrovascular disease
- Define the diagnostic criteria for each clinical application of transcranial Doppler
- Describe basic principles used to interpret spectral waveforms

Modalities: The focus is neurovascular ultrasound using transcranial Doppler. CT, MRI and Arteriography may be used as part of the case studies presentation, for correlation only, but these modalities will not be taught specifically.

Neuroimaging Fundamentals: A Case Study Approach

Course Directors: Ryan Hakimi & Emma Fields

9:00 am - 2:30 pm

Course Description/Abstract: This course is intended for providers in training as well as the Advanced practice providers (Physician Assistants, Nurse Practitioners and Clinical Nurse Specialists) practicing in both outpatient and acute care settings to be knowledgeable in interpreting neuro-imaging for accurate diagnosis and timely interventions to ensure better patient outcomes.

Course Schedule:

9:00 - 9:05 am	Welcome and Program Overview (Emma Fields)
9:05 - 9:30 am	Fundamentals of neuroimaging modalities (Emma Fields)
9:30- 10:00 am	How to calculate an ASPECTS score and its clinical implication (Doug Mayson)
10:00 -10:30 am	Multi-modality acute stroke neuroimaging (Jorge Ortiz-Garcia)
10:30 - 11:00 am	Break
11:00 - 11:45 am	Incorporating neuroimaging in prognostication post-cardiac arrest (Ryan Hakimi)
11:45 -12:30 pm	Using optic nerve sheath diameter and TCD for ICP assessment (Venkatakrisna Rajajee)
12:30 - 1:00 pm	Break
1:00-1:40 pm	Introduction to neuromuscular ultrasound (Eduardo Cortez-Garcia)
1:40-2:10 pm	A case-based approach to demyelinating diseases (Keith Dombrowski)
2:10 -2:30 pm	Live Q & A (All panelists)

Course Objectives:

- Illustrate how to calculate the ASPECTS score and its clinical implication in acute stroke management

2. Review the use of multimodal imaging in acute stroke management
3. Illustrate the use of neuroimaging in prognosticating patient outcomes post-cardiac arrest
4. Describe non-invasive intracranial pressure monitoring techniques
5. Describe the uses of neuromuscular ultrasound in neurological patients
6. Discuss neuroimaging modalities in the management of neurological patients with demyelinating diseases

Modalities: MRI, CT /CTA/CTP, Conventional cerebral angiography, Optic nerve sheath ultrasound, TCD, Peripheral nerve ultrasound

Sunday, January 31

Practice Updates - Neurosonology

Course Director: Jongeyol Kim

9:00 am – 12:30 pm

Course Description/Abstract: This Neurosonology Course will provide a comprehensive update on physics, indications, clinical applications, interpretation, and coding and billing for Neurosonology (carotid ultrasonography and TCD). Nationally and internationally renowned faculty of leaders in the field of Neurosonology will provide the up-to-dated reviews in retrospective areas of expertise. This will be accomplished via didactic lectures but will be enhanced by ample time for faculty panel discussions to provide interaction with the audience.

Course Schedule:

9:00 - 9:45 am	Physics - Leni Karr (tentative)
9:45 - 10:30 am	Carotid Ultrasound - Dr. Charles Tegeler, MD
10:30 -11:00 am	Break
11:00 -11:45 am	Transcranial Doppler - Aarti Sarwal, MD
11:45 -12:30 pm	Coding and Billing - Alexander Razumovsky, PhD

Course Objectives:

1. Explain physics of carotid ultrasonography and transcranial Doppler ultrasonography
2. Review the clinical indications and usefulness of the carotid ultrasound and TCD and apply contemporary protocols and practices in common neurovascular disorders
3. Discuss the coding and billing for neurosonology such as the appropriate CPT and Medicare and local carriers' coverages

Modalities: Ultrasound, Carotid ultrasound, Transcranial Doppler
